It's an application for creating and maintaining a database with your vehicle details and costs. It would have used some customization options or tools for creating an account and restricting access inside the application. SSuite Office - DIY Vehicle Maintenance Review: It comes with the option to create a database with vehicle details, simply provide the vehicle, number, make, model, year and even registration number. You can also create maintenance logs and specify service number, description, date, technician name and distance. It comes with a separate category in which you can add the total amount of expenses and it has the option to print information inside the program. Entries can be edited at any time and the application allows you to add an image to each entry. More features and tools You can copy images to and from the clipboard, the program lets you use the built-in calendar for selecting the days in which maintenance works were made. It would have been nice if the application allowed you to add some other details on your vehicle or its service history. All in all, SSuite Office - DIY Vehicle Maintenance is a useful but very basic application for creating a database with your vehicle details and keeping track of maintenance works. All information inside the program can be printed, but it needs some more tools. 2 Total Score By: Vlad Veklenko (2013-09-10) Total Score: 7 SSuite Office - DIY Vehicle Maintenance Review: Performance: Design: Usability: Overall: If you own or manage a large fleet of vehicles, then there are some applications that could help you manage and keep an eye on maintenance works. Did you find out that you have a problem with your Android device's screen? Have you found out that your Android system stops working after your phone or tablet is charged and left alone for a while? Does your Android tablet's screen have a problem with switching on and off? Don't worry, here's a quick solution that could solve your problem.

1. Turn off your phone or tablet Don't turn on your phone or tablet if you have a problem with the Android system. Turn your device completely off by pressing the power button for at least 10 seconds.
2. Check if the charger is working Make sure that your device is connected to the charger when you want to check if it works. Turn your charger on and try to charge your device.
3. Check if the battery is charged The battery is usually the reason why your device stops working after being charged or if it doesn't turn on. Turn on your device and check the battery charge level. You can also use the battery level indicator to show that the battery is charged.
4. Make sure your device is connected to the right charger Check if your device is charging and make sure that the charger is connected to the right socket. If your device is connected to a charging station that isn't the right charger, the problem could be worse.
5. Turn off your device and leave it alone If the battery is charged, turn off your device and leave it alone for at least 10 minutes. Make sure that you keep the device completely off. Don't do anything while the device is turned off.
6. Check if the phone or tablet is hot If your device is hot when you touch it, then it could be broken. Turn your device off and wait for 5 minutes before turning it on again. Check if the device is hot when you turn it on again. If it's still hot, try to use it for a while and if the problem still persists, the device could be completely broken.
7. Clean the screen If your device screen is dirty, try to clean it. Put a cotton ball on your finger and gently swipe it on the screen. You can also try to clean your screen with a soft toothbrush and water.
8. Recharge your device If none of the solutions mentioned above works, you should try to recharge your device. Try to fully charge your device if possible. If your device isn't completely charged, try to charge it until it's fully charged and then try again.
